
2.45GHz Microwave generator

Posted by Emblation - 2010/08/31 08:01

Emblation have developed products which may be of benefit to those involved in studying microwave heating, microwave power and medical hyperthermia applications at 2.45GHz.

The ISYS245 has been designed to deliver high power microwave energy in a compact turnkey package suitable for laboratory and general use.

The ISYS245 was recently featured in the May edition of Microwave Journal and we are also offering a medical grade equivalent (MSYS245) which is detailed at our website www.emblation.com
